1-32. (Canceled).

33. (Previously presented) A shelf for a vehicle interior, comprising:

a front section including a recess for a visor and an upper surface configured to receive at least one object;

an elevated section structured to couple to the vehicle interior; and

a rear section configured to contact the vehicle interior;

wherein a width of the shelf is substantially equal to a width of the visor.

34. (Previously presented) A shelf for a vehicle interior, comprising:

a first section comprising a lower surface and an upper surface, the lower surface configured to receive a visor, with the upper surface configured to receive one or more objects; and

a second section structured to receive a visor fastener, the visor fastener coupling the shelf to the vehicle interior;

wherein a width of the shelf is substantially equal to a width of the visor.

35. (Previously presented) A shelf for a vehicle interior, comprising:

a front section including a recess for a visor and an upper surface configured to receive at least one object;

an elevated section structured to couple to the vehicle interior; and

a rear section configured to contact the vehicle interior;

wherein a width of the shelf is up to 125% of a width of the visor.

36. (Previously presented) A shelf for a vehicle interior, comprising:

a first section comprising a lower surface and an upper surface, the lower surface configured to receive a visor, with the upper surface configured to receive one or more objects; and

a second section structured to receive a visor fastener, the visor fastener coupling the shelf to the vehicle interior;

wherein a width of the shelf is up to 125% of a width of the visor.
